Read the operator’s manual entirely. When you see this symbol, the subsequent instructions and warnings are serious - follow without exception. Your life and the lives of others depend on it!

Illustrations may show optional equipment not supplied with standard unit.
Machine Identification

Record your machine details in the log below. If you replace this manual, be sure to transfer this information to the new manual.

If you or the dealer have added options not originally ordered with the machine, or removed options that were originally ordered, the weights and measurements are no longer accurate for your machine. Update the record by adding the machine weight and measurements with the option(s) weight and measurements.

Neither is any liability assumed for damages resulting from the use of the information contained herein. Great Plains Manufacturing, Inc. reserves the right to revise and improve its products as it sees fit. This publication describes the state of this product at the time of its publication, and may not reflect the product in the future.

Trademarks of Great Plains Manufacturing, Inc. include: AccuShot, Max-Chisel, Row-Pro, Singulator Plus, Short Disk, Swath Command, Terra-Tine, Ultra-Chisel, and X-Press.

Brand and Product Names that appear and are owned by others are trademarks of their respective owners.

Printed in the United States of America
**Important Safety Information**

**Look for Safety Symbol**

The SAFETY ALERT SYMBOL indicates there is a potential hazard to personal safety involved and extra safety precaution must be taken. When you see this symbol, be alert and carefully read the message that follows it. In addition to design and configuration of equipment, hazard control and accident prevention are dependent upon the awareness, concern, prudence and proper training of personnel involved in the operation, transport, maintenance and storage of equipment.

**Be Aware of Signal Words**

Signal words designate a degree or level of hazard seriousness.

**DANGER** indicates an imminently hazardous situation which, if not avoided, will result in death or serious injury. This signal word is limited to the most extreme situations, typically for machine components that, for functional purposes, cannot be guarded.

**WARNING** indicates a potentially hazardous situation which, if not avoided, could result in death or serious injury, and includes hazards that are exposed when guards are removed. It may also be used to alert against unsafe practices.

**CAUTION** indicates a potentially hazardous situation which, if not avoided, may result in minor or moderate injury. It may also be used to alert against unsafe practices.

**Prepare for Emergencies**

- Be prepared if a fire starts
- Keep a first aid kit and fire extinguisher handy.
- Keep emergency numbers for doctor, ambulance, hospital and fire department near phone.

**Be Familiar with Safety Decals**

- Read and understand “Safety Decals” on page 5, thoroughly.
- Read all instructions noted on the decals.
- Keep decals clean. Replace damaged, faded and illegible decals.
Wear Protective Equipment

▲ Wear protective clothing and equipment.
▲ Wear clothing and equipment appropriate for the job. Avoid loose-fitting clothing.
▲ Because prolonged exposure to loud noise can cause hearing impairment or hearing loss, wear suitable hearing protection such as earmuffs or earplugs.
▲ Because operating equipment safely requires your full attention, avoid wearing entertainment headphones while operating machinery.

Handle Chemicals Properly

Agricultural chemicals can be dangerous. Improper use can seriously injure persons, animals, plants, soil and property.
▲ Read and follow chemical manufacturer’s instructions.
▲ Wear protective clothing.
▲ Handle all chemicals with care.
▲ Avoid inhaling smoke from any type of chemical fire.
▲ Store or dispose of unused chemicals as specified by chemical manufacturer.

Avoid High Pressure Fluids

Escaping fluid under pressure can penetrate the skin, causing serious injury.
▲ Avoid the hazard by relieving pressure before disconnecting hydraulic lines.
▲ Use a piece of paper or cardboard, NOT BODY PARTS, to check for suspected leaks.
▲ Wear protective gloves and safety glasses or goggles when working with hydraulic systems.
▲ If an accident occurs, seek immediate medical assistance from a physician familiar with this type of injury.

Use Safety Lights and Devices

Slow-moving tractors and towed implements can create a hazard when driven on public roads. They are difficult to see, especially at night.
▲ Use flashing warning lights and turn signals whenever driving on public roads.
▲ Use lights and devices provided with implement

Keep Riders Off Machinery

Riders obstruct the operator’s view. Riders could be struck by foreign objects or thrown from the machine.
▲ Never allow children to operate equipment.
▲ Keep all bystanders away from machine during operation.
Transport Machinery Safely

Maximum transport speed for implement is 20 mph (32 kph), 13 mph (22 kph) in turns. Some rough terrains require a slower speed. Sudden braking can cause a towed load to swerve and upset.

▲ Do not exceed 20 mph. Never travel at a speed which does not allow adequate control of steering and stopping. Reduce speed if towed load is not equipped with brakes.

▲ Comply with state and local laws.

▲ Do not tow an implement that, when fully loaded, weighs more than 1.5 times the weight of towing vehicle.

▲ Carry reflectors or flags to mark Discovator in case of breakdown on the road.

▲ Keep clear of overhead power lines and other obstructions when transporting. Refer to transport dimensions under “DV Specifications and Capacities” on page 26.

▲ Do not fold or unfold the Discovator while the tractor is moving.

Shutdown and Storage

▲ Lower Discovator, put tractor in park, turn off engine, and remove the key.

▲ Secure Discovator using blocks and supports provided.

▲ Detach and store machine in an area where children normally do not play.

Tire Safety

Tire changing can be dangerous and should be performed by trained personnel using correct tools and equipment.

▲ When inflating tires, use a clip-on chuck and extension hose long enough for you to stand to one side—not in front of or over tire assembly. Use a safety cage if available.

▲ When removing and installing wheels, use wheel-handling equipment adequate for weight involved.
Practice Safe Maintenance

▲ Understand procedure before doing work. Use proper tools and equipment. Refer to this manual for additional information.
▲ Work in a clean, dry area.
▲ Lower the machine, put tractor in park, turn off engine, and remove key before performing maintenance.
▲ Disconnect battery ground cable (-) before servicing or adjusting electrical systems or before welding on machine.
▲ Inspect all parts. Make sure parts are in good condition and installed properly.
▲ Remove buildup of grease, oil or debris.
▲ Remove all tools and unused parts from machine before operation.

Safety At All Times

Thoroughly read and understand the instructions in this manual before operation. Read all instructions noted on the safety decals.
▲ Be familiar with all machine functions.
▲ Operate machinery from the driver’s seat only.
▲ Do not leave Discovator unattended with tractor engine running.
▲ Do not stand between the tractor and machine during hitching.
▲ Keep hands, feet and clothing away from power-driven parts.
▲ Wear snug-fitting clothing to avoid entanglement with moving parts.
▲ Watch out for wires, trees, etc., when folding and raising machine. Make sure all persons are clear of working area.
Safety Decals

Safety Reflectors and Decals

Your implement comes equipped with all lights, safety reflectors and decals in place. They were designed to help you safely operate your implement.

▲ Read and follow decal directions.
▲ Keep lights in operating condition.
▲ Keep all safety decals clean and legible.
▲ Replace all damaged or missing decals. Order new decals from your Great Plains dealer. Refer to this section for proper decal placement.
▲ When ordering new parts or components, also request corresponding safety decals.

To install new decals:
1. Clean the area on which the decal is to be placed.
2. Peel backing from decal. Press firmly on surface, being careful not to cause air bubbles under decal.

Introduction

Great Plains welcomes you to our growing family of new product owners. The Series VIII Discovator, DV (Disc & Coulter) 8321-8552DV have been designed with care and built by skilled workers using quality materials. Proper setup, maintenance, and safe operating practices will help you get years of satisfactory use from the machine.

Models Covered

8321DV 21-Foot 3-section
8324DV 24-Foot 3-section
8326DV 26-Foot 3-section
8328DV 28-Foot 3-section
8333DV 33-Foot 3-section
8537DV 37-Foot 5-section
8544DV 44-Foot 5-section
8548DV 48-Foot 5-section
8552DV 52-Foot 5-section

Description of Unit

The Series VIII Discovator, DV (Disc & Coulter) 8321-8552DV is a three or five-section field finishing, one-pass tillage tool. Working width ranges from 21 to 52 feet. The implement is designed to combine discing/slicing, cultivating, harrowing and herbicide incorporation in a single pass. Various finishing attachments are available to customize your tillage and residue requirements for your operation.

Document Family

550-353E Assembly Manual
550-353Q Pre-Delivery Manual
550-353M Operator Manual (this document)
550-353P Parts Manual

Definitions

The following terms are used throughout this manual.

NOTICE

A crucial point of information related to the preceding topic. Read and follow the directions to remain safe, avoid serious damage to equipment and ensure desired field results.

Useful information related to the preceding topic.

Right-hand and left-hand as used in this manual are determined by facing the direction the machine will travel while in use unless otherwise stated. An orientation rose in some line art illustrations shows the directions of: Up, Back, Left, Down, Front, Right.

Using This Manual

This manual will familiarize you with safety, assembly, operation, adjustments, troubleshooting, and maintenance. Read this manual and follow the recommendations to help ensure safe and efficient operation.

The information in this manual is current at printing. Some parts may change to assure top performance.
Owner Assistance

If you need customer service or repair parts, contact a Great Plains dealer. They have trained personnel, repair parts and equipment specially designed for Great Plains products.

Refer to Figure 2

Your machine’s parts were specially designed and should only be replaced with Great Plains parts. Always use the serial and model number when ordering parts from your Great Plains dealer. The serial-number plate is located on the left end of the top front tool bar.

Record your 8315/8318/8321/8324DVN Discovator model and serial number here for quick reference:

Model Number:__________________________
Serial Number: __________________________

Your Great Plains dealer wants you to be satisfied with your new machine. If you do not understand any part of this manual or are not satisfied with the service received, please take the following actions.

1. Discuss the matter with your dealership service manager. Make sure they are aware of any problems so they can assist you.

2. If you are still unsatisfied, seek out the owner or general manager of the dealership.

Further Assistance

Great Plains Manufacturing, Inc. wants you to be satisfied with your new Discovator. If for any reason you do not understand any part of this manual or are otherwise dissatisfied with the product please contact:

Great Plains Service Department
1525 E. North St.
PO Box 5060
Salina, KS 67402-5060

Or go to www.greatplainsag.com and follow the contact information at the bottom of your screen for our service department.
Preparation and Setup

This section helps you prepare your tractor and 8321-8552DV Discovator for use, and covers tasks that need to be done seasonally, or when the tractor/Discovator configuration changes.

Before using the Discovator in the field, you must hitch it to a suitable tractor, inspect systems and level the Discovator. Before using the Discovator for the first time, and periodically thereafter, certain adjustments and calibrations are required.

Prior to Going to the Field Checklist

Complete this checklist before routine setup:

- Read and understand “Important Safety Information” on page 1.
- Check that all working parts are moving freely, bolts are tight, and cotter pins are spread.
- Make sure your tractor horsepower matches the implement you are pulling. This is important so the implement can do the best possible job.
- Clean all hydraulic couplings and connect to tractor as shown on page 13 and 14.
- If machine is folded, remove the transport pins from wing stops. (DO NOT remove pins if the wing is leaning against the pins or putting pressure on the pins. Use the hydraulics to pull the wings in completely before unpinning them.) Once the pins are removed, slowly untold the unit. Make sure no one is under the wings during the unfolding process.
- Check again for hydraulic leaks and watch that hoses do not get pinched in hinges, wing stops, etc.
- After the machine is completely unfolded, raise and lower the Discovator several times to purge air from the hydraulic system. Again check for hydraulic leaks and tighten or replace if necessary.
- Check safety chain hookup. Make sure all warning lights are hooked up and functioning correctly.
- Check that all grease fittings are in place and lubricated. See “Lubrication” on page 21. The hubs will come pre-greased and will not need greased at this time.
- Check that all safety decals and reflectors are correctly located and legible. Replace if damaged. See “Safety Decals” on page 5.
- Inflate tires to pressure recommended and tighten wheel bolts as specified. See “Tire Inflation and Warranty” on page 26.
- Put transport locks in place and refold the machine slowly. Put wing stop pins in place. Always use the transport pins when moving from field to field. You are now ready to go to the field.
Hitching Tractor to Discovator

**DANGER**

**Crushing Hazard:**
Do not stand or place any body part between Discovator and moving tractor. You may be severely injured or killed by being crushed between the tractor and Discovator. Stop tractor engine and set parking brake before attaching cables and hoses.

To prevent soil compaction on rows, set tractor wheels between rows. For hillsides and steep slopes, set tractor wheels as wide as possible for maximum stability.

1. Raise tractor three-point arms (if equipped) clear up to clear Discovator.
2. For TWO-WHEEL DRIVE and MFWD tractors, pin drawbar in fixed center position for field and transport. For FOUR-WHEEL DRIVE and TRAC-DRIVE tractors, leave one hole clearance on each side of drawbar for field position, hitch damage may occur if pinned solid. Pin in center position for transport to maintain maximum steering control.
3. Hitch the tractor to the Discovator using the block or yoke clevis determined by the tractor drawbar. Use the correct size pin for clevis or block.

**Load Sway Hazard:**
Lock drawbar swing to center position to minimize any side-to-side sway to assure proper tracking in the field, and safe road travel. See “Transporting” on page 18, for safe transporting

Refer to Figure 3

4. Use jack ➊ to raise and lower Discovator tongue.

Refer to Figure 4

5. After hitching tractor to Discovator, store jack on storage tube ➋ on side of Discovator tongue.
6. Secure Discovator safety chain to an anchor on the tractor capable of pulling the unit.
Hydraulic Hose Hookup

Great Plains hydraulic hoses are color coded to help you hookup hoses to your tractor outlets. Hoses that go to the same remote valve are marked with the same color.

<table>
<thead>
<tr>
<th>Color</th>
<th>Hydraulic Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>Black</td>
<td>Lift (2 hoses)</td>
</tr>
<tr>
<td>Green</td>
<td>Fold (2 hoses)</td>
</tr>
<tr>
<td>Red</td>
<td>Gang (2 hoses)</td>
</tr>
</tbody>
</table>

**High Pressure Fluid Hazard:**
Relieve pressure before disconnecting hydraulic lines. Use paper or cardboard, NOT BODY PARTS, to check for leaks. Wear protective gloves and safety glasses or goggles when working with hydraulic systems. Escaping fluid under pressure can have sufficient pressure to penetrate the skin causing serious injury. If an accident occurs, seek immediate medical assistance from a physician familiar with this type of injury. Only trained personnel should work on system hydraulics.

**Refer to Figure 5**

**Hose Handles**
To distinguish hoses on the same hydraulic circuit, refer to, "Hydraulic Hose Hookup" on page 14. The hose under an extended symbol feeds a cylinder base end. The hose under a retracted-cylinder symbol feeds a cylinder rod end.

Clean all hydraulic couplings and hook hoses to tractor.

**First Time Field Adjustments**

**Pre-Leveling of Machine**

**Front to Rear Leveling**

**Refer to Figure 6**

1. Pre-leveling of machine can be done on a concrete slab or level surface. Lower machine so sweeps are 2-3” off of ground on the center frame. Adjust turnbuckle at the front of machine to level it from front to back. (Shorten to bring front down, extend to bring front up). Level machine with the front row just slightly deeper or lower than the back.
Side to Side Leveling

Refer to Figure 7

2. Set the wings to match the depth of the center. This is done by adjusting the lift cylinder eyebolt on each wing. Lengthen the bolt to run shallower, shorten the bolt to run deeper.

Setting Gauge Wheels

Refer to Figure 8

3. Once the machine has been adjusted and set to the desired working depth, you may now adjust the gauge wheels. The gauge wheels (if equipped) should be set in field position to be $\frac{1}{2}$" to $1\frac{1}{2}$" off the ground.

4. To adjust the gauge wheels you will need to loosen the 2 bolts on the side of the gauge wheel bracket, and removed the hitch pin and adjust the gauge wheel arm up or down till it is $\frac{1}{2}$" - $1\frac{1}{2}$" off the ground and replace the hitch pin and cotter key. Retighten the bolts.

With the manual gauge wheels anytime the depth of the machine is adjusted you must adjust the gauge wheels following the steps listed above.

Refer to Figure 9

5. Once the machine has been adjusted and set to the desired working depth, you may now adjust the gauge wheels. The gauge wheels (if equipped) should be set in field position to be $\frac{5}{2}$" to $1\frac{1}{2}$" off the ground.

6. To adjust the hydraulic gauge wheels you will need to adjust the eyebolt. To bring the gauge wheels up loosen the jam nut in front of the bracket and tighten the jam nut on the rear. To adjust the gauge wheels down loosen the rear jam nut and tighten the front jam nut.

With the hydraulic gauge wheel option anytime the depth of the discs are adjusted the hydraulic cylinder will adjust the gauge wheels accordingly.
Disc Gang Depth Calibration

Refer to Figure 10
7. Be sure the pre-load is set at $8\frac{3}{4}$ on the spring assemblies. Calibrate the depth gauge pointer by extending cylinder until the under frame clearance of the 20” blades is $4\frac{1}{2}$”. Place the decal on the stand with the pointer at ‘0’.

Field Operation of Disc Gangs

Refer to Figure 11
8. Adjust the disc or coulter gangs to run $1\frac{1}{2}$” to 1” shallower than the cultivator sweeps by using the gang cylinders. The pointer on the gauge should read $-\frac{1}{2}$” to +1”. Running the disc gangs slightly above the sweeps allows the sweeps to work in firm ground which improves trash flow and incorporation as well as leaving a smoother, more level seed bed.

9. Do not run the disc or coulter gangs in the RED ZONE. Running the disc gangs too deep will cause plugging of trash as well as excessive wear on the gangs, gang springs and Discovator frame. Running disc gangs too deep may also tend to hold the front of the entire machine out of the ground. (The disc gangs should only be run in the RED ZONE when using 18” blades that are nearing the end of their wear life).
Refer to Figure 12

10. You are ready to operate the machine in the field at this point. You should have someone observe the machine during operation for levelness, front to rear and side to side. When you lower the machine to the desired working depth, set the depth stop ① at the front of machine to ensure the unit will operate at a consistent depth every pass. After setting the stop, if a change of depth is desired, 1 full turn of the handle ② either in or out will change the depth approximately \( \frac{1}{4} \)" up or down respectively.

11. Make any fine tuning adjustments on the leveling of the machine.
Operating Instructions

This section covers general operating procedures. Experience, machine familiarity, and the following information will lead to efficient operation and good working habits. Always operate farm machinery with safety in mind.

Pre-Start Checklist
Perform the following steps before transporting the Discovator to the field.
- Carefully read “Important Safety Information” on page 1.
- Lubricate Discovator as indicated under “Lubrication” on page 21.
- Check all tires for proper inflation.
- Check all bolts, pins, and fasteners. Torque as shown in “Torque Values Chart” on page 28.
- Check Discovator for worn or damaged parts. Repair or replace parts before going to the field.
- Check hydraulic hoses, fittings, and cylinders for leaks. Repair or replace before going to the field.

Transporting
See “Hitching Tractor to Discovator” on page 13 before transporting the Discovator.

Check Tractor Capacity and Configuration
- Know the weight of your Discovator (see table on specification page).
- Consult your tractor manual for 3-point limitations.
- Add weights to tractor as required.
- When determining the weight of your Discovator, be sure to include the weight of any options.

Transport Checklist
- Plan the route. Avoid steep hills. Keep Clearances in mind.
- Make all electrical and hydraulic connections. See “Hitching Tractor to Discovator” on page 13.
- Raise Discovator.
- Be sure all transport locks are installed.
- Always have lights on for highway operation.
- Comply with all federal, state and local safety laws when traveling on public roads.
- Travel with caution. Allow safe clearance. Remember that the Discovator is wider than the tractor.

---

High Pressure Fluid Hazard:
Relieve pressure and shut down tractor before connecting, disconnecting or checking hydraulic lines. Use a piece of paper or cardboard, NOT BODY PARTS, to check for leaks. Wear protective gloves and safety glasses or goggles when working with hydraulic systems. Escaping fluid under pressure can have sufficient pressure to penetrate the skin causing serious injury. If an accident occurs, seek immediate medical assistance from a physician familiar with this type of injury.

Loss of Control Hazard:
Use a tractor rated for the load. Add tractor ballast as needed. Do not exceed 20 mph. Towing the Discovator with a vehicle that is not adequate, or at high speeds, could lead to loss of vehicle control. Loss of vehicle control can result in a serious road accident, severe injury or death. Check that your tractor has enough power to handle the weight of the Discovator. Refer to your tractor’s operator manual for capacities and ballast requirements.
General Operation and In-Field Adjustments

1. Remove the transport pins and unfold machine. Make sure the fold cylinders are fully extended to allow the wings to fully flex in the field.

2. If possible have someone observe the machine during first time operation for levelness, front to rear and wings to center frame. Adjust each as needed. For front to rear, either extend or shorten the length of the turnbuckle on the self-leveler. Never run the machine with the back lower (deeper) than the front. To adjust the machine from side to side, use the eyebolt on each wing, See “First Time Field Adjustments” on page 14. The gauge wheels (if equipped) should be set in field position to be $1\frac{1}{2}$" to $1\frac{1}{2}$" off the ground.

3. The ideal working speed for the Discovator is 5$\frac{1}{2}$ to 6$\frac{1}{2}$ mph. Working too slow may cause plugging, poor incorporation or mixing of crop residue and reduced weed kill. Running too fast may cause streaks in chemical incorporation and ridging.

4. The Discovator is designed as a secondary tillage tool and is designed to leave a finished seedbed following some form of fall or spring tillage. For best results, if at all possible, run the machine at a slight angle of the rows. This will improve trash flow and help spread the residue more evenly throughout the field.

5. When you have the machine set to the desired working depth, set the depth stop slide on the depth control bar. This is located at the front of the machine on the brace bar. This will maintain a constant depth each time after raising and lowering the machine.

6. If after setting the depth stop, the detent on the tractor kicks out before the stop contacts the button on the depth stop, slow the hydraulic flow speed down. If the problem persists, contact the factory service representative for the possible adjustments. Do not try the rebound valve without first contacting the factory service rep.

7. Adjust the drag to leave the desired results while maintaining the trash flow through the drag.

Scraper Settings

The scrapers are set at the factory but should be checked periodically and may need re-adjusted as follows:

- Disc scrapers will need the bolts (rigid scraper) or u-bolts (spring scraper) loosened up and slid into blade until they just touch the blade, and torqued to specs.

Rear Attachment Settings

Spike Drag Settings

Refer to Figure 13

8. On the spike drag, start with 5 links hanging from the chain in drag arm bottom slot. (This is the starting point for worst conditions). The cleaner the ground, the shorter the pull chain may be pulled up. On the spike drag, one of the links in the first row of angles is turned over. This allows the trash to start flowing through the drag easier by changing the angle of the first row of teeth. Always make sure that the drag is never pulling off of the hang chains. If so, shorten pull chains.
HD Spike & Reel Settings

Refer to Figure 14

9. On the hd spike drag, start with 5 links hanging from the chain 1 in drag arm bottom slot. (This is the starting point for worst conditions). The cleaner the ground, the shorter the pull chain may be pulled up. Always make sure that the drag is never pulling off of the hang chains 2. If so, shorten pull chains.

10. Adjust nut 3 to where spring 4 is just making contact with front plate 5.

11. Turn nut 3 another 1" further on spring rod 6 to set pre-load on spring 4.

12. Lengthen turnbuckle 7 to adjust front mini shank 8 to run more aggressive and shorten to run more passive.

13. Be sure the fold catch assembly 9 is aligned 3 7/8" from back of rear angle iron of fold catch to rear of arm as shown.

Coil Tine Settings

Refer to Figure 15

14. On coil tine drags start with the top eyebolt 1 centered. Then level drag mainframe 2 by changing position of leveling bolts 3. There are two holes in the arm and four in the mainframe. One of these will get you where you need to be to be level. To lay teeth back, remove the clip pin 4 on each end and move strap adjustment by pushing the handle 5 forward. The strap has 5 holes that will let you lay the teeth back several degrees. If it is desired to set one row, usually the first, different than the rest as far as the angle is concerned, it can be adjusted individually by loosening the u-bolt and set-screw on each end of the drag bar. Down pressure on the drag is achieved by lengthening the eyebolt 1 on the top bracket. Depending on the amount of down pressure, you may need to re-level the mainframe.

Reel Settings

15. If a reel is added, adjust the amount of down pressure by either shortening the eyebolt for less pressure or lengthening for more pressure.
Maintenance and Lubrication

Maintenance

1. Always use the transport lock when working on or doing maintenance to the Discovator. If folded, be sure your wing stop pins are in place. Read and understand all safety decals on your equipment.

2. During the first season of operation, and periodically after that, check your bolts for tightness. Check shank pivot bolts for tightness. Check shank pivot bolts on the spring-loaded shank, these must remain tight to prevent excessive wear on the shank assembly.

3. Replace or rotate worn parts as needed -- hinge bolts, clevis pins, bearings, sweeps, shanks, etc. Boron disc blades cannot be rolled to be sharpened, they must be ground. Cracks and breakage will occur if rolled.

4. Check and tighten or replace any hydraulic leaks. Check hoses for any leaks. It is important that there are no leaks on the equipment.

5. Grease wheel bearings and walking beams sparingly. Over greasing may cause damage to seals and reduce the life of the bearing. Grease hinge points periodically.

6. Check drag bolts for looseness or excessive wear. Replace broken or bent teeth. Your drag is an important part of the tillage operation.

7. If machine is stored outdoors over the winter months, it is a good idea to fold the machine then set it down on the ground so all the cylinders are retracted to protect the cylinder rods. This will extend the life of the cylinder seals and reduce internal and external leaks.

By following and maintaining a routine service and lubrication program, your tillage equipment will give you many years of service.

For the most current manual information, visit Great Plains website listed below. For more information on operating, adjusting or maintaining your Great Plains Discovator, assistance is available. Please contact:

Great Plains Service Department
1525 E. North St.
PO Box 5060
Salina, KS 67402-5060

Or go to www.greatplainsag.com and follow the contact information at the bottom of your screen for our service department.

Lubrication

| Multipurpose spray lube | Multipurpose grease lube | Multipurpose oil lube | 50 | Intervals (service hours) at which lubrication is required |

Wheel Bearing Hub

1 zerk on each hub; 4 total

Units built after 05/2017 may not have grease zerks on the hubs.

Type of Lubrication: Grease

Quantity: Sparingly, Do Not Over Grease, may cause damage seal.
Repack wheel bearings annually or every 2500 acres.
**Inside Wing Hinge Points**

On all inside wing hinge points
Type of Lubrication: Grease
Quantity: Until grease emerges

![Inside Wing Hinge Points](image1)

**Outside Wing Hinge Points**

On all outside hinge points
Type of Lubrication: Grease
Quantity: Until grease emerges

![Outside Wing Hinge Points](image2)

**Walking Beam Pivot Bearings**

One on each walking beam
Type of Lubrication: Grease
Quantity: Sparingly and check for endplay
If there is a lot of end play take apart, check bearings and re-pack

![Walking Beam Pivot Bearings](image3)

### Tire Warranty Information

All tires are warranted by the original manufacturer of the tire. Tire warranty information is found in the brochures included with your Operator's and Parts Manuals or online at the manufacturer's web sites listed below. For assistance or information, contact your nearest Authorized Farm Tire Retailer.

**Manufacturer Web site**

- BKT  www.bkt-tire.com
Hydraulic Connectors and Torque

Refer to Figure 16 (a hypothetical fitting)

Leave any protective caps in place until immediately prior to making a connection.

NPT - National Pipe Thread
Note tapered threads, no cone/flare, and no O-ring.

Apply liquid pipe sealant for hydraulic applications.
Do not use tape sealant, which can clog a filter and/or plug an orifice.

JIC - Joint Industry Conference (SAE J514)
Note straight threads and the 37-degree cone on “M” fittings (or 37-degree flare on “F” fittings).
Use no sealants (tape or liquid) on JIC fittings.

ORB - O-Ring Boss (SAE J514)
Note straight threads and elastomer O-Ring. Prior to installation, to prevent abrasion during tightening, lubricate O-Ring with clean hydraulic fluid.

Use no sealants (tape or liquid) on ORB fittings.
ORB fittings that need orientation, such as the ell depicted, also have a washer and jam nut (“adjustable thread port stud”). Back jam nut away from washer. Thread fitting into receptacle until O-Ring contacts seat. Unscrew fitting to desired orientation. Tighten jam nut to torque specification.

WARRANTY

Great Plains (a division of Great Plains Manufacturing, Inc.) warrants to the original purchaser that this Great Plains machine will be free from defects in material and workmanship for a period of one year (Parts & Labor) from the first use date when used as intended for personal use; ninety days for custom/commercial or rental use.

Second year limited warranty covers Parts ONLY (personal usage only, excluding labor and wear items). This warranty is limited to the replacement of any defective part by Great Plains. Great Plains reserves the right to inspect any equipment or part which are claimed to have been defective in material or workmanship.

The following items and/or conditions are NOT COVERED UNDER WARRANTY: Failures resulting from the abuse or misuse of the equipment, failures occurring as a result of accidental damage or Force Majeure, failures resulting from alterations or modifications, failures caused by lack of normal maintenance as outlined in the operator’s manual, repairs made by non-authorized personnel, items replaced or repaired due to normal wear (such as wear items and ground-engaging components including, but not limited to, disc blades, chisel points, tires, bushings, and scrapers), repeat repair due to improper diagnosis or improper repair by the dealer, temporary repairs, service calls and/or mileage to and from customer location, overtime premium, or unit hauling expenses. The warranty may be voided if the unit is towed at speeds in excess of 20 miles per hour (32 kilometers per hour), or failures occurring from soils with rocks, stumps, or other obstructions.

Great Plains reserves the right to make changes in materials or design of the product at any time without notice. The warranty shall not be interpreted to render Great Plains liable for damages of any kind, direct or consequential or contingent to property. Furthermore, Great Plains shall not be liable for damages resulting from any cause beyond its control. This warranty does not extend to crop loss, losses caused by planting or harvest delays or any expense or loss of labor, supplies, rental machinery, or for any other reason.

No other warranty of any kind whatsoever expressed or implied, is made with respect to this sale; and all implied warranties of merchantability and fitness for a particular purpose which exceed the obligations set forth in this written warranty are hereby disclaimed and excluded from this sale.

This warranty is not valid unless registered by a certified Great Plains dealer.

Effective July 15, 2020
