DECLARATION OF CONFORMITY

Great Plains UK Ltd. hereby declare that the Great Plains Mounted X-Press, as defined by the Serial Number attached to the Machine Chassis, conforms with the following Directives and Regulations, and has been certified accordingly.

EC Machinery Directive 2006/42/EC.

The Supply of Machinery (Safety) Regulations 2008.

Specifically related harmonised standards are:

EN ISO 12100-1: 2003 (Safety of Machinery).

THE MANUFACTURER:

Great Plains UK Ltd.
Woodbridge Road
SLEAFORD
Lincolnshire
NG34 7EW
England

Telephone (+44) (0)1529 304654.

CERTIFIED ON BEHALF OF GREAT PLAINS UK LTD:

Alan Davies
Head of UK Engineering
WARRANTY
TERMS AND CONDITIONS

In this warranty Great Plains UK Ltd., is referred to as “the Company”.

1. Subject to the provisions of this warranty the Company warrants each new machine sold by it to be sold free from any defect in material or workmanship for a period of 12 months from date of installation with the end-user.

Some specific items have additional warranty over and above the standard 12 months. Details of these can be obtained upon request directly from the distributor or Great Plains UK Ltd.

2. If the machine or part thereof supplied by the Company is not in accordance with the warranty given in clause 1 the Company will at its option:
   (a) make good the machine or part thereof at the Company’s expense, or
   (b) make an allowance to the purchaser against the purchase price of the machine or part thereof, or
   (c) accept the return of the machine and at the buyer’s option either:
       I) repay or allow the buyer the invoice price of the machine or part thereof, or
       II) replace the machine or part thereof as is reasonably practical.

3. This warranty shall not oblige the Company to make any payment in respect of loss of profit or other consequential loss or contingent liability of the Purchaser alleged to arise from any defect in the machine or impose any liability on the Company other than that contained in clause 2.

4. Any claim under this warranty must be notified to the Company in writing specifying the matters complained of within 14 days from the date of repair.

5. Any claim under this warranty must be made by the original purchaser of the machine and is not assignable to any third party.

6. If the purchaser hires out the machine to any third party the warranty shall apply only to matters notified to the Company in writing within 90 days of the date of delivery and clause 1 shall be read as if the period of 90 days were substituted for the period of 12 months.

7. The warranty will cease to apply if:
   (a) any parts not made, supplied or approved in writing by the Company are fitted to the machine or any repair is carried out to the machine other than by or with the express written approval of the Company or
   (b) any alterations not expressly authorized by the Company in writing are made to the machine or
   (c) the machine is damaged by accident or
   (d) the machine is abused or overloaded or used for a purpose or load beyond its design capabilities, or used in conjunction with a tractor whose power output capability exceeds the stated implement power requirement by more than 40%. For the purpose of these terms and conditions, “stated implement power requirement” refers to wheeled tractors unless specifically stated. These power requirements should be reduced by 20% when used in conjunction with tracked tractors.
   (f) the machine is operated as part of a ‘cultivation train’ where more than one implement is being towed, without the express written approval of Great Plains UK Ltd.
   (g) any maintenance is not carried out in accordance with the service schedules in the operator’s manual.
   (h) the Installation and Warranty Registration Certificate is not received by Great Plains UK Ltd., Service Dept., Woodbridge Road, Sleaford, Lincolnshire, England, NG34 7EW, within 7 days of installing a new machine.

6. Faults and Remedies
Introduction

Foreword

Make sure you read and follow the Operating Instructions carefully before using the machine. By doing so, you will avoid accidents, reduce repair costs and downtime and increase the reliability and service life of your machine. Pay attention to the safety instructions!

Great Plains will not accept any responsibility for any damage or malfunctions resulting from failure to comply with the Operating Instructions.

These Operating Instructions will assist you in getting to know your machine and in using it correctly for its intended purposes. First, you are given general instructions in handling the machine. This is followed by sections on servicing, maintenance and the action to be taken should a malfunction occur.

These operating instructions are to be read and followed by all persons working on or with the machine, e.g:

- Operation (including preparation, remedying of faults in the operating sequence and servicing).
- Maintenance (maintenance and inspection)
- Transportation.

Together with the Operating Instructions, you receive a Spare Parts List and a Machine Registration form. Field service technicians will instruct you in the operation and servicing of your machine.

Following this, the Machine Registration form is to be returned to your dealer. This confirms your formal acceptance of the machine. The warranty period begins on the date of delivery.

We reserve the right to alter illustrations as well as technical data and weights contained in these Operating Instructions for the purpose of improving the machine.

Warranty Guidelines

The period of liability for material defects (warranty) relating to our products is 12 months. In the case of written deviations from the statutory provisions, these agreements shall apply.

They shall become effective upon installation of the machine with the end customer. All wear parts are excluded from the warranty.

All warranty claims must be submitted to Great Plains via your dealer.
Use for the Intended Purpose
The Great Plains Mounted X-Press is built using the latest technology and in accordance with the relevant recognised safety regulations. However, risks of injury for the operator or third parties and impairment of the machine or other tangible assets can arise during use.

The machine is only to be operated when in a technically perfect condition and for the intended purpose, taking into consideration safety and risks and following the Operating Instructions. In particular, faults that can impair safety are to be remedied immediately.

Original parts and accessories from Great Plains have been specially designed for this machine. Spare parts and accessories not supplied by us have not been tested or authorised. Installation or use of non-original Great Plains products may have a detrimental effect on specific design features of the machine and affect the safety of machine operators and the machine itself. Great Plains will accept no liability for damage resulting from the use of non-original parts or accessories.

The Great Plains Mounted X-Press is designed solely as a cultivation implement. Use for any other purpose, e.g., as a means of transport, will be deemed to be improper use. Great Plains will accept no liability for damage resulting from improper use. The risk will be borne solely by the operator.

Use of the Mounted X-Press behind high power tractors (in excess of 40% above the maximum recommended) can lead to high loads and stresses which can cause long term structural damage to the chassis and key components. Such overloading can compromise safety and is to be avoided.
1. Safety Data

The following warnings and safety instructions apply to all sections of these Operating Instructions.

1.1 Safety Symbols on the machine

- Parts may fly off during operation. Keep a safe distance away from the machine!
- Keep clear of the working range of foldable machine components!
- No passengers are allowed on the machine!
- Never reach into any revolving parts!
- Never reach into areas where there is a danger of being crushed by moving parts!

Read and observe the Operating Instructions before starting up the machine!

Watch out for escaping pressurised fluids! Follow the instructions in the Operating Instructions!
Refer to Operating Instructions before attempting maintenance.
1.2 Operating Instructions:

The Operating Instructions distinguish between three different types of warning and safety instructions. The following graphic symbols are used:

- **Important!**
- **Risk of injury!**
- **Risk of fatal and serious injuries!**

It is important that all the safety instructions contained in these Operating Instructions and all the warning signs on the machine are read carefully.

Ensure that the warning signs are legible. Replace any signs that are missing or damaged.

These instructions must be followed in order to prevent accidents. Inform other users of the warnings and safety instructions.

Do not carry out any operations which may affect safe use of the machine.

All references to left and right in this manual are made from the rear of the machine, facing the direction of travel (unless otherwise stated).

1.3 Operational Safety

The machine is to be put in operation only after instruction has been provided by an employee of the authorised dealer or an employee of Great Plains. The “Machine Registration” form is to be completed and returned to your dealer.

All protective and safety equipment, such as removable protective equipment, must be in place and functioning reliably before the machine is put in use.

- **Check screws and bolts regularly for tightness and retighten if necessary.**
- **In the event of malfunctions, stop and secure the machine immediately.**
- **Ensure that any faults are remedied immediately.**

1.4 No Liability for Consequential Damage

The X-Press has been manufactured with great care. However, problems may still occur when it is used for the intended purpose. These may include:

- Worn wearing parts.
- Damage caused by external factors.
- Incorrect driving speeds.
- Incorrect setting of the unit (incorrect attachment, non-adherence to the Setting instructions).
1. Safety Data

Therefore, it is crucial to always check your machine before and during operation for correct operation and adequate application accuracy.

Compensation claims for damage which has not occurred to the machine is excluded. This includes any consequential damage resulting from incorrect operation.

1.5 Road Traffic Safety

When driving on public roads, tracks and areas, it is important to observe the relevant road traffic laws as well as the specific regulations relating to this machine.

Pay attention to the permitted axle loads, tyre carrying capacity, and total weight in order to maintain adequate braking and steerability (these figures are shown on the serial plate).

Passengers on the machine are strictly forbidden!

Max. road transport speed 16mph (25km/h).

1.6 Accident Prevention

In addition to the Operating Instructions, it is important to observe the accident prevention regulations specified by agricultural trade associations. It is the Operator’s responsibility to ensure that all other persons are excluded from the danger zones surrounding or on the machine during its operation.

It is the Owner’s responsibility to ensure:

- the Operator is trained and competent to use the machine & tractor,
- the tractor is suitable for the machine
- adequate Risk and COSHH assessments have been undertaken regarding the machine’s use.

Specifically, these include issues concerning contact with the soil, dust, crop residues, chemicals, lubricants and other compounds during operation or maintenance, and the possibility of stones being ejected at high speed during work.

Beware of trapping hazards when manipulating the parking stands or other moving parts. Ensure any heavy components are fully supported when removing pins / bolts.

1.6.1 Hitching-up the machine

There is a risk of injury when hitching/unhitching the machine. Observe the following:

- Secure the machine against rolling.
- Take special care when reversing the tractor!
- There is a risk of being crushed between the machine and the tractor!
- Park the machine on firm, level ground.
1.6.3 Changing Equipment

- Secure the machine to prevent it from accidentally rolling away!
- Use suitable supports to secure any raised frame sections suspended above you!
- Caution! Risk of injury due to projecting parts!

Never climb on to rotating parts such as the roll unit. These parts may rotate causing you to slip and suffer serious injury!

Removing components during maintenance may affect the stability of the machine. Ensure it is fully supported in case of unexpected weight shifts.

1.6.4 During Operation

Ensure that the working range and the area around the machine are clear (children!) before operating the machine.

Always ensure adequate visibility!

Do not stand on the machine while it is in operation!

Operators must have a valid driving licence in order to drive on public roads. In the operating area, the operator is responsible for third parties.

The person in charge must:

- provide the operator with a copy of the Operating Instructions, and ensure that the operator has read and understood the instructions.

- make sure that the operator is aware of the specific regulations relating to the machine when driving on public roads.

1.7 Servicing & Maintenance

Ensure that regular checks and inspections are always carried out within the periods required by law or specified in these Operating Instructions.

When carrying out service and maintenance work always:

- switch off the tractor engine and remove the ignition key.
- wait until all the machine parts have stopped moving.

Pay particular attention to those items which require specialist service tools or training to be carried out by qualified personnel. Do not attempt to service these items yourself! These include items retaining pressure (e.g. accumulator circuits), or force (e.g. spring tines), and DD Rolls of any type.

Prior to performing maintenance and servicing work, ensure that the machine is positioned on solid, level ground and is secured to prevent it rolling away. Do not use any parts to climb on to the machine unless they are specifically designed for this purpose.

Before cleaning the machine with water, steam jets (high-pressure cleaning apparatus) or other cleaning agents, cover all openings into which, for reasons of safety or operation, no water, steam or cleaning agents are to penetrate (bearings,
for instance).

Lubricate all the lubricating points to force out any trapped water.

When carrying out servicing and maintenance work, retighten any loose screw connections.

When servicing the machine take precautions against soil, dust, seed coatings, oil or any other hazardous substances that you might encounter.

On a new machine tighten all nuts and bolts after 5 hours work and again after 15 hours. This also applies to parts that have been moved or replaced. After the initial 15 hours of work a once a week check should be sufficient depending on daily work rates.

1.8 Operating Areas

The operating areas include the drawbar, hydraulic connections and depth adjustment equipment as well as all operating points requiring maintenance.

All operating areas will be specified and described in detail in the following chapters on servicing and maintenance.

Observe all safety regulations included in the section dealing with Safety, and in the subsequent sections.

1.9 Authorised Operators

Only those persons who have been authorised and instructed by the operator may operate the machine. The operator must be at least 16 years of age.

1.10 Protective Equipment

For operation and maintenance, you require:

- Tight fitting clothing.
- Strong protective gloves (to provide protection against sharp-edged machine components).
- Protective goggles (to stop dirt getting into your eyes).
2. Transportation and Installation

Transportation and initial installation of the machine are described in this chapter.

2.1 Delivery

The machine is normally delivered, fully assembled.

- The machine can be lifted off with a crane or other suitable lifting equipment.
- The machine should be hitched to a tractor and driven off a low-loader.

2.2 Transportation

The Mounted X-Press can be transported on public roads by hitching it up to a tractor or on a low-loader.

- It is important to observe the permitted dimensions and weights when transporting the machine.
- If the machine is transported on a trailer or a low-loader, it must be secured using straps or other devices.
- Before transporting the machine on public roads, it must be adjusted to its transportation position and the stipulations relating to road transportation fulfilled.

Adjustments, including the attachment of transport devices, should be made at ground level; lowering the machine may be necessary to achieve this.

- The maximum permissible speed is 25 km/h.

2.3 Installation

When carrying out installation and maintenance work there is a higher risk of injury. It is important that you familiarise yourself with the machine and read the Operating Instructions beforehand.

Operator instruction and initial installation of the machine are carried out by our service technicians or authorised distributors.

The machine must not be used in any way beforehand! The machine can only be released for operation after instructions have been provided by our service technicians or authorised distributors.

- If any modules or parts have been removed for transportation, these shall be mounted by our service technicians/authorised dealers before the instruction takes place.
- Check all important screw connections!
- Lubricate all nipples and joints!
- Check all hydraulic connections and lines for damage.
2. Transportation / Installation

2.4 Hitching Up
Hitching up a Tractor to the Mounted X-Press / Preparing for Transport

⚠️ When hitching-up the machine, ensure that no-one is between the tractor and the machine.

1. Connect the tractor to the machine using the hydraulics to raise or lower the the height of the tractor lower link arms.

2. When the lower link arms are aligned fit the lower link pins and the lynch pins.

3. Fit the tractor toplink between the tractor and the machine.

4. Raise the machine using the tractor link arms.

2.5 When driving on the road
When driving on the road the machine must be converted to the transportation position.

⚠️ When driving on the road, raise the machine completely to prevent the working elements dragging on the ground.

Ensure that the tractor rear lights are visible from behind during transport.

2.6 Parking the machine
In order to avoid damage as a result of moisture, the machine should be parked, if possible, indoors or under cover.

⚠️ When manoeuvring the machine, pay attention to your surroundings. Ensure that nobody is in the manoeuvring area (watch for children!).

• Park the machine on level and solid ground.
• Lower the machine onto the disc units.
• Remove the toplink and lower the link arms so that pins can be removed.
• Switch off the tractor.

4. Adjustment/Operation
4.1 Description

Fig. 4.01: Great Plains Mounted X-Press

1. 3 Point Linkage
2. Discs
3. Rear Packer
4. Packer Depth Adjusters
5. Disc Angle Adjusters
6. Level Board
7. Level Board Adjusters
The Great Plains Mounted X-Press is a versatile implement designed to perform an excellent shallow cultivation combined with effective consolidation.

It can be used in reduced tillage systems to incorporate stubble or to work down ploughing on lighter soil types. Like all Great Plains machines it features the latest innovations which combine to give an efficient, well-built unit with unrivalled reliability.

Consolidation is key to most operations. The design of the Mounted X-Press ensures that this is not compromised during use. This is because the penetration of the front discs is achieved by angling the disc gangs and not by transferring weight from the rear packer onto the discs. The in line rear packer ensures uniform consolidation is achieved across the field.

The Mounted X-Press can operate in situations where high levels of surface trash exist. This is possible because of the massive clearance within the machine. The front and rear disc gangs are 830mm apart and the distance between the rear gang and the DD packer is another 240mm. The Mounted X-Press is designed for high speed operation at 8-12kph. The in-built weight of around 600kg per metre ensures that the desired depth is maintained at the optimal forward speed.
4.2 3 Point Linkage

The 3 point linkage is Category 3.

Fig. 4.02: 3 Point Linkage

4.3 Disc Units

The Mounted X-Press features two rows of discs which chop and mix the crop residue. A disc spacing of 250mm ensures a fine tilth.

The discs fitted to the Mounted X-Press are 500mm in diameter (20") and 6mm thick. They are manufactured from heat treated chrome boron steel which ensures excellent wear resistance and enhanced working life. Each disc is mounted on a Pro-Active sprung leaf linked to a track rod system. Gang angles can be varied with ease and accuracy using a graduated adjuster.

Adjustable angling of the discs (between 10° - 25°) ensures penetration and stubble mixing are achieved in one pass. Working depth can be varied via the 3 point linkage and the rear roll linkage.

A level, evenly cultivated finish is maintained by adjusting the balance of soil throw between the front and rear disc. Sprung Pro-Active leaves offer protection against damage as well as offering a degree of contour following as they flex up and down in work.

Fig. 4.03: Disc Angle Adjustment Jacks

Fig. 4.04: Discs

4.4 Leveling Boards

With the chassis set level, lower the levelling boards until they are carrying soil. The levelling boards will need to be set higher during 1st pass operations especially on ploughed land where large clods may not be able to pass under or between the sprung leaves.
The boards need to carry a certain amount of soil to effect a levelling operation and also to give a clod to clod crushing action. Use the jack adjusters to raise and lower the boards to carry more or less soil when levelling the headland troughs for example.

To raise the level board turn the jack adjuster clockwise. To lower the level board turn the jack adjuster anti clockwise.

**General rules when setting the machine**

- Run the chassis horizontal to give even drive on both sets of rings.
- Run slightly tail low to give increased clod cutting and consolidation in harder conditions.
- In trashy conditions the use of the levelling board may be limited due to raking trash.
- Increase the rake angle of the levelling board in spring time operation to carry more soil for levelling.
- Reduce rake angle on levelling board to hold soil and rub clod against clod in harder conditions. This will also align clods with the DD rings facilitating better cutting.

**4.5 DD Light Packer**

The DD Light packer is made up of individual Double Disc (patented) Ring segments.

Even in heavy, wet soils it can easily be operated with minimal blockages occurring.

The rear DD Light packer carries a proportion of the machine’s weight to ensure consolidation. It also regulates the depth of the disc units. The corrugated surface left by the packer is weatherproof both for wet or dry situations.

**4.6 Cage Packer**

The cage packer provides a clod crushing and consolidating action and leaves a loose, open soil profile. It is well suited for dry, light, non-sticky soils.

In work, the cage packer carries a proportion of the machine’s weight to ensure consolidation. It also regulates the depth of the machine.
4.7 Aqueel 2 Packer

The Aqueel 2 is a rubber, specialist self-cleaning tyre which leaves a patterned surface profile consisting of conical indentations. This is designed to combat surface water movement and wind erosion in the field. The benefit of Aqueeled ground (reservoir tillage) is gained on light, easy working soils that can slump or compact.

4.8 HD Packer

This durable, fully welded steel packer with ‘zone’ consolidation is designed for minimal maintenance. It is ideal for use in rough ground conditions and soils with high stone content.

4.9 ML Packer

A combination of notched wheels and teeth for driving and lifting high volumes of soil, the Maxiflift Packer gives a fine finish whilst still consolidating the ground just below the surface. This packer achieves a good mixing effect at high speed.

4.10 VR Packer

With its ‘V’ shaped profile to the wheels which fill with soil in use to achieve soil-soil wearing, the V-Packer lifts soil and stays cleaner on the inside compared with similar U-shaped packers. This packer works well with or without scrapers, depending on the conditions. Light in
weight, it enables the use of smaller tractors with mounted machines.

![VR Packer](image)

**Fig. 4.10: VR Packer**

### 4.11 Work Settings

Optimum performance has been found to be achieved when the DD Light roll rings have worn away the painted finish leaving a smooth shiny surface. When the DD Light rings are new or rusty, soil may tend to pick up on the surface and blockage may occur, this will reduce when the rings are shiny again.

The Mounted X-Press should be run with the chassis level to slightly tail low. In practice it is possible to use the Mounted X-Press on ground conditions that are unsuitable to achieve the desired effect, and it is usually possible to operate the DD Light roll without regular blockage under such unsuitable conditions, assuming that the roll assemblies are tight, the scrapers correctly adjusted and rings smooth. As such, especially under wet conditions, it is advisable to check on the cultivation effect of the Mounted X-Press.

The mounted Mounted X-Press should be lifted fully clear of the ground for all headland turns. Turning with the disc units or packer on the ground could lead to damage of these components.

In work, the tractor lower link arms may be run in float in order to allow the machine to follow undulations in the soil.

**General Rules when Setting the Mounted X-Press**

- The lighter the land conditions the less the disc angle required and the forward speed can be increased.
- The wetter the land conditions the less the disc angle required and the forward speed will need to be decreased.
- Heavier land will require more of a disc angle and a slower forward speed.
- The more the trash the less the angle on the discs and forward speed will have to be decreased.
- On ploughed land reduce the disc angle to give a cutting/chopping action.
- In hard conditions increase the disc angle to increase penetration.

![Disc Angle Setting](image)
4.12 Starting Settings

This page details the recommended starting settings for the Mounted X-Press. These settings can then be used as a base for further adjustment in order to get the optimum performance from your machine.

Disc Angle Adjustment Jacks

4.12.1 Variation of Settings

If working conditions change (for example, from dry to wet conditions) then the following table should be consulted as a rough guide.

<table>
<thead>
<tr>
<th>Variation in Condition</th>
<th>Setting Revision</th>
</tr>
</thead>
<tbody>
<tr>
<td>From Hard/Dry to Loose/Wet</td>
<td>Reduce Disc Angle</td>
</tr>
<tr>
<td></td>
<td>Reduce Chassis Pitch</td>
</tr>
<tr>
<td>From Stubbles to Higher Trash (To Increase Incorporation)</td>
<td>Increase Disc Angle</td>
</tr>
<tr>
<td></td>
<td>Reduce Speed</td>
</tr>
<tr>
<td></td>
<td>Increase Chassis Pitch</td>
</tr>
<tr>
<td>From Shallow to Deep (Note 75-100mm Max Working Depth)</td>
<td>Move Pins on Roll Linkage</td>
</tr>
<tr>
<td></td>
<td>Reduce Speed</td>
</tr>
<tr>
<td></td>
<td>Increase Disc Angle</td>
</tr>
</tbody>
</table>
4.13 Adjusting Depth
To change the working depth it is advisable to lift the machine clear of the ground so that the rear roll linkage becomes loose. The depth is changed by adding shims above and below the collar on the depth control rod.

Fig. 4.11: Roll Linkage

When the depth has been altered, lower the machine into work and check operation. If the depth change has been significant then other settings could be affected. This could be chassis pitch (front to rear) and disc angle for the given depth.

A small amount of cultivation, eg. a 20 metre run, should be carried out before altering these settings to check whether they are now suitable for the cultivation effect required. These settings should be addressed immediately to prevent too much unsatisfactory work being carried out.

4.14 Using Shims
Before using shims to alter machine settings ensure the machine is stationary and the tractor is turned off with the keys out. Ensure that all operators are clear of the machine and that no load is being held on any existing shims in the depth control rod.

To fit the shims hold them by the handle and, using a firm action, clip them onto the rod as shown in Fig. 4.06. They are removed by using a finger to pull firmly on the handle.

- Check the cylinder / depth control rod for damage and debris before fitting shims.
- Only attempt to add or remove shims using the handle. Trying to manipulate shims using the jaws could result in injury.
- When changing machine settings ensure both sides of the machine mirror each other. The left hand cylinder should contain the same amount of shims as the right, for example. Failure to do this could result in damage to the machine.

Fig. 4.12: Shims
4.15 Work Instructions
Driving speed
The Mounted X-Press can be driven at speeds of up to 12 km/h.

This depends on the field conditions (type of soil, surface trash, etc.).

Drive more slowly if the conditions are difficult or a firmer finish is required.

Turning: Before turning, the machine should be lifted out of work while driving. Likewise, it should be lowered back into work once the turn has been completed.

4.16 Checks
The working quality depends on the adjustments and checks made prior to and during work, as well as on regular servicing and maintenance of the machine.

Before beginning work it is therefore important to carry out any necessary servicing and to lubricate the machine as required.

Checks prior to, and during work:
• Is the machine correctly hitched up and the coupling device locked?
• Is the machine in a level operating position and the working depth set correctly?

• Are the discs and other cultivation tools in a serviceable condition?
• Are the scrapers still operable, so that the rolls do not jam?
5. Servicing and Maintenance

Follow the safety instructions for servicing and maintenance.

5.1 Servicing

Your machine has been designed and constructed for maximum performance, operational efficiency and operator friendliness under a wide variety of operating conditions.

Prior to delivery, your machine has been checked at the factory and by your authorised dealer to ensure that you receive a machine in optimum condition.

To ensure trouble-free operation, it is important that servicing and maintenance work is performed at the recommended intervals.

5.2 Cleaning

In order to ensure that the machine is always in operating condition and to achieve optimum performance, perform the cleaning and servicing work at regular intervals.

Avoid cleaning the roll / disc bearings with a high-pressure hose or a direct water jet. The housing, screwed connections and ball bearings are not watertight.

5.3 Disc Hub Maintenance

Grease every disc hub until grease shows from the seals according to the lubricating intervals outlined in Section 5.8.

Check disc hubs regularly for tightness.

Regularly examine hub caps, seals, shear and pivot bolts and all tracking bolts for tightness and effectiveness twice weekly or every 50 working hours (whichever is more frequent).

5.3.1 Tightening Disc Hubs

1. Ensure that the bearing seal is in the correct orientation when replacing / assembling components.

2. Ensure that the stub axle is free from dirt and the nut and outer bearing can easily slide on it.

3. Tighten the crown nut with a hand spanner (a torque wrench is not required) while turning the hub clockwise until the bearing drags slightly (you feel the hub turning heavily). Some resistance will be due to friction from the seal.

4. Turn back the crown nut to the next locking position. Even if the tightening of the nut has reached an exact fixing position, turn it back.

5. Insert the retaining pin.

6. Try to shake/rock the outer edge of the hub/spindle: play of 0.1mm / 0.2mm will not reduce the bearings’ life and, in addition, prevents overheating. If the adjustment is correct the hub should turn freely with the only friction being from the seal.
5.3.2 Bearing Seals

It is important when replacing the labyrinth type bearing seals in disc hubs that the seal is fitted the right way round. The chamfered lip side should be at the outside of the bearing housing, nearest the disc arm (see Fig. 5.01). This chamfered lip prevents dirt ingress into the housing and also allows grease to be flushed through when greasing.

5.4 Packers

Maintenance of these packers is limited to yearly/end of season greasing of the bearings and regular inspection to ensure the assemblies are tight, and scrapers are correctly set.

![Correct Seal Orientation](image)

The scraper is intended to clear dirt from blocking between adjacent DD rings. If adjustment to the scrapers is required ensure that the scraper cannot contact the spacer even under load. Regularly inspect the spacers for signs of wear and adjust any scrapers to ensure no contact can be made.

5.4.1 DD Light Roll

The spacers and rings on the DD Light packer are held under tension by the end plates at the outer ends of the roll tube.

![Specialist Equipment](image)

Specialist equipment is required for the disassembly of DD Light packers. Please consult your dealer under any circumstances that require disassembly of these packers.

5.5 Preparation for Storage

If you need to store the machine for a longer period, observe the following points:

- Park the machine undercover if possible.
- Protect the roll / discs against rust. If you need to spray the implements with oil, use light biologically degradable oils, e.g. rape oil.

Fig. 5.02: Correct Seal Orientation
Cover any rubber sections before using oil sprays. These sections must not be oiled. Remove any traces of oil with a suitable cleaning agent.

5.6 Operator Support
If you have a problem, please contact your dealer. They will endeavour to solve any problems which may occur and provide you with support at all times.

In order to enable your dealer to deal with problems as quickly as possible, it helps if you can provide them with the following data. Always state the:

• Customer Number
• Name and Address
• Machine Model
• Serial Number of Machine
• Date of Purchase and Operating Hours
• Type of Problem

5.7 Maintenance Intervals

Apart from daily maintenance, the maintenance intervals are based on the number of operating hours and time data.

Keep a record of your operating hours to ensure that the specified maintenance intervals are adhered to as closely as possible.

Never use a machine that is due for maintenance. Ensure that all deficiencies found during regular checks are remedied immediately.
5. Servicing and Maintenance

5.8 Maintenance Overview
5.9 Lubricating the Machine

Please read the section entitled “Using Lubricants” carefully before lubricating the machine. The machine must be lubricated regularly in order for it to remain serviceable. Regular lubrication also contributes towards extending the service life of your machine. The recommended lubricating intervals are specified in “Inspection” and “Maintenance Intervals”.

After it has been washed using a high-pressure hose or steam cleaned, the machine should always be lubricated using a grease gun.

5.10 Handling of Lubricants

Please ensure that you read the following instructions as well as the relevant information. This also applies to any of your employees who handle lubricants.

Hygiene

Lubricants do not present a health hazard provided they are used for their specified purpose.

In the case of prolonged skin contact, lubricants - especially low-viscosity oils - may remove the natural layer of fat contained in the skin, resulting in dryness and possible irritation.

It is important to take extreme care when handling waste oil as it may contain other irritants.

Vapours given off by cleaning agents and oils are also a potential health hazard. You should therefore not carry any oily cloths around. Change soiled work clothing as soon as possible.

Always exercise extreme care and observe the recommended hygiene rules when handling mineral oil products. Details of these handling regulations can be found in information provided by the health authorities.

Storage and Handling

• Always store lubricants where they cannot be accessed by children.
• Never store lubricants in open or unlabelled containers.

Fresh Oil

• Apart from taking the usual care and observing hygiene rules, there is no need to take any special precautions when handling fresh oil.

Waste Oil

• Waste oil can contain harmful contaminants which may cause skin cancer, allergies and other illnesses.

Attention!

Oil is a toxic substance. Should you swallow any oil, do not try to vomit. Contact a doctor immediately. Protect your hands with barrier cream or wear gloves to avoid contact with the skin. Wash off any traces of oil thoroughly with soap and hot water.

• Wash your skin thoroughly with soap and water.
• Use special cleaning agents to clean any dirt off your hands.
• Never wash oil residue from your skin with petrol, diesel fuel or paraffin.
• Avoid skin contact with any oily clothing.
• Do not keep any oily rags in your pockets.
• Wash soiled clothing before wearing it again.
• Ensure that any oily footwear is disposed of in the proper manner.

Measures in case of injury through oil

Eyes:
Should any oil be splashed into your eyes, rinse with water for 15 minutes. If the eye is still irritated, contact a doctor immediately.

If oil is swallowed
If oil is swallowed, it is important not to induce vomiting. Contact a doctor immediately.

Skin irritation caused by oil
In case of prolonged skin contact, wash off the oil with soap and water.

Oil Spills
Use either sand or a suitable granular absorbent to soak up any spilt oil. Dispose of the oil-contaminated absorbent in the proper manner.

Oil Fires
Never use water to extinguish an oil fire. The oil will float on the water causing the fire to spread.

Burning oil-lubricant must be extinguished using a carbon dioxide powder or foam extinguisher. Always wear respiratory equipment when dealing with fires of this type.

Waste Oil Disposal
Oil-contaminated waste and used oil must be disposed of in accordance with current legislation.

Waste oil must be collected and disposed of in accordance with local regulations. Never pour used oil into unsealed sewage systems or drains or onto the ground.

5.11 Lubricants

Lubricants
Great Plains strongly recommend the use of Lithium Complex EP2 Grease in the disc hubs of your Mounted X-Press. This grease is a Lithium Complex soap dispersed in a mineral oil and is interpreted by IARC as being non-carcinogenic. Grease cartridges are available from Great Plains (P12710). Using this grease in combination with the labyrinth type seal it is permissible to lengthen the greasing interval on the disc hubs to 200 hours. If using a standard agricultural grease the disc hubs should be lubricated every 50 hours.

Advantages of Lithium Complex EP2 Grease

- Excellent mechanical stability.
- Excellent load carrying properties.
- Wide temperature range.
- Excellent oxidation stability.
- Excellent water resistance.
- Compatibility with other greases.

All other lubricating points on the machine can be lubricated with multigrade lubricating grease as specified in DIN 51825 KP/2K - 40.
## 6. Faults and Remedies
